The pain of trigeminal neuralgia can drastically affect your day-to-day life. The experts at CyberKnife of Long Island, located in Suffolk County, offer a full range of treatment options.

At CyberKnife of Long Island you’ll receive a thorough evaluation, including consultation with both a neurosurgeon and a radiation oncologist to discuss all medical therapy, surgical and radiosurgery options. We offer the convenience of having all our specialists — whose experience includes more than eight years in stereotactic radiosurgery — under one roof for treatment and follow-up.

If medication isn’t helping, and if a procedure requiring needles or surgery is not the best or your preferred option, consider our renowned CyberKnife treatment. CyberKnife is not actually a knife, but a painless treatment that delivers precisely targeted radiation and offers several benefits over traditional surgery:

- CyberKnife radiosurgery targets the pain fibers of the trigeminal nerve root, which are responsible for your pain experience and symptoms.
- Non-invasive treatments mean that no incisions (cuts in your skin) are required, and anesthesia isn’t needed.
- Most patients find pain relief in as little as days or weeks.
- Most treatments take only about an hour — some cases of trigeminal neuralgia need just one treatment — and you can go home and resume normal activities the same day.

CyberKnife of Long Island, part of North Shore-LIJ Health System, has been treating patients for 25 years. And with two locations in western Suffolk, our services are also close to home.
