Research helps propel the field of medicine. Working closely with investigators at the Feinstein Institute for Medical Research, the residents and faculty at Cohen Children’s Medical Center have developed new treatments and therapies that will improve the quality of care we provide to patients.
Scholarly pursuits by residents are highly encouraged and supported. By the beginning of a resident’s PGY2 year most residents have selected a mentor to help them with their scholarly work. In addition, many residents may elect to take a “research month” to pursue in depth scholarly activity during their PGY2 and PGY3 years.

The Feinstein Institute for Medical Research is a unique, disease-oriented biomedical research institution dedicated to advancing science located on the North Shore campus. More than 100 physicians and scientists study disease at all levels – from molecular biology to patient-oriented research – and translate their scientific findings into practical use. The institute provides training, monetary support and personnel to help residents with their research projects. In addition, each pediatric division is involved in a number of research initiatives and they welcome resident participation. These projects include those involving bench research, clinical research, performance-improvement methodology and population health.

North Shore-LIJ sponsors an annual Resident Academic Day, where residents throughout the health system compete for awards, and the Department of Pediatrics sponsors a Resident Research Day and a Quality Symposium. In addition, each year a number of residents present their work at national meetings. The program directors and faculty are committed to fostering a resident's academic pursuits.

Below is a list of Publications and Presentations from CCMC residents for the last academic year.
