The future of cancer care is here – right in your neighborhood
Imbert Cancer Center was specifically designed and created with the needs of our cancer patients in mind. We provide a comfortable, peaceful and private environment that is conducive to healing in every way.

The design of the main lobby features nautical shapes and custom lighting inspired by the seaside community where the facility is located.
Expanded, multidisciplinary cancer care on the South Shore

Imbert Cancer Center brings together renowned specialists in surgical oncology, medical oncology, radiation oncology, interventional radiology and diagnostic radiology in one building conveniently located in Bay Shore. The new facility builds on the cancer services we have been offering the community for years, including colorectal, gynecologic oncology, thoracic and breast care. Our team of cancer specialists collaborate to provide you with a personalized cancer plan to best meet all of your treatment goals, including your physical and emotional needs.

Exceptional care for your cancer. Total care for you.

Imbert Cancer Center is part of the Northwell Health Cancer Institute, one of the largest cancer programs in the area – giving you easy access to a broad range of specialized treatments. Our cancer specialists are members of Northwell Health Physician Partners, a group of dedicated Northwell Health physicians who work together in over 100 specialties.

We recognize that there’s more to your health than your cancer diagnosis. That’s why our cancer specialists work closely with local cardiologists, endocrinologists, and other specialists to carefully coordinate your cancer treatment and manage any other conditions you may have. Our team of specialists and connected hospitals share an electronic medical record and seamlessly care for all your health needs, right here in your community.

Innovative medical oncology

Our medical oncology services include the latest chemotherapy, immunotherapy and targeted therapies. Regardless of the treatment you need, you’ll have an experienced medical oncologist by your side every step of the way to manage your care and make your experience as comfortable as possible.

State-of-the-art radiation therapy

Radiation therapy is an integral part of cancer care. With our advanced treatment options, patients can stay close to home with the support of friends and family when they need them most.

Our radiation therapy services include:
- Intensity-modulated radiation therapy
- Stereotactic radiosurgery
- Stereotactic body radiation therapy
- High dose rate (HDR) brachytherapy

Patients receiving infusion treatments (chemotherapy, immunotherapy, etc.) are cared for in private treatment bays overlooking a garden. Warm marine-inspired hues of blues and greens encourage a calming environment.
Accredited imaging
Imaging is an important tool in diagnosing cancer and monitoring treatment. Our new cancer facility includes a Northwell Health Imaging Center so the radiology services you need are just steps away.

Our new center offers access to Long Island’s largest group of subspecialized, fellowship-trained radiologists. Northwell Health Imaging is accredited by the Joint Commission and is the first radiology practice in New York State — and seventh in the nation — to be designated as a Diagnostic Center of Excellence by the American College of Radiology (ACR) for achieving the highest levels of imaging quality, safety and care.

Imaging services include:
- Low dose PET/CT
- SPECT/CT
- MRI
- Ultrasound
- Digital X-ray
- Interventional radiology/procedures

Specialized surgery
Our experienced surgical oncologists and surgical subspecialists have collectively performed thousands of procedures, from minimally invasive surgeries to robot-assisted treatments for rare and complex tumors. They use specialized techniques to minimize recovery time, shorten hospital stays and maximize your path to wellness. Should you need surgery, Southside Hospital is conveniently located and closely integrated with our cancer treatment program.

Leading edge clinical trials
Clinical trials are an important option for many cancer patients. Our new cancer center is part of the Northwell Health Cancer Institute, a leader in cancer clinical trials for over 30 years. We offer patients the opportunity to participate in a wide range of clinical trials across nearly every cancer type - close to home. Strategically affiliated with Cold Spring Harbor Laboratory, a world leader in cancer research, we’re speeding the advancement of new discoveries for cancer care.

We offer our patients a wide range of support services – including nutrition counseling, genetic counseling, social work and support groups – and have relationships with local organizations that offer additional support programs. New medical oncology patients at the center will be supported by a specially trained oncology nurse navigator who is available to assist in getting you the care you need.
